Please deploy your application on CS3, and package your project in a zip file and submit it to Canvas. The source files should include all the source code, and an HTML file lab12.html which contains a hyperlink to your application on the CS3 server.

Download and run the [code](https://csns.cysun.org/file/view?id=5890988)  [_ \(https://csns.cysun.org/wiki/content/cysun/cs3220/midterm/s17\)](https://csns.cysun.org/wiki/content/cysun/cs3220/midterm/s17)_. Modify the code so that it stores data in a database instead of in the application scope.

- The application must use MVC architecture, and database access must use JDBC.
- In addition to the application source code, please turn in an SQL script file *lab12.sql* which contains the statements to create and populate all the tables in the database.
