

Using MySQL on CS3

Each student in the class has an account on the CS3 server. You should have received your username and password by email; if not, please check your Canvas Inbox (it's on the left navigation panel).

Each CS3 account comes with a MySQL database so you don't have to install MySQL Server on your computer. The database information is as follows:

- Host: cs3.calstatela.edu
- Port: 3306
- Username: <Your CS3 account username>
- Password: <Your CS3 account password>
- Database: <Same as your CS3 account username>

The easiest way to access the database is to use Adminer at <http://cs3.calstatela.edu/adminer-mysql.php>  (<http://cs3.calstatela.edu/adminer-mysql.php>). Note that on the Adminer login page, you should leave the Server field empty so it uses `localhost` - this is because Adminer also runs on CS3, so to Adminer, the database server runs on localhost.

You may use other MySQL client like [MySQL Workbench](https://dev.mysql.com/downloads/workbench/)  (<https://dev.mysql.com/downloads/workbench/>) as well.
