Midterm Information ⇅

Midterm will be held from **6:00pm on Wednesday 10/26** (i.e. Wednesday of Week 10). You must be in person to have access to the midterm.

An assignment named "Midterm" will be unlocked on Canvas at 6pm on Wednesday 10/26. In the midterm you will be asked to develop an MVC web application. See **Sample Midterm (https://calstatela.instructure.com/courses/80633/pages/sample-midterm)** for what the midterm would look like. The application this time will of course be different, but the format and difficulty will be similar in the sense that:

- The application will consist of 3 to 4 operations. No CSS required.
- At least one operation will involve form processing.
- Only operations working properly on CS3 will receive full credit. If an operation doesn't work on CS3, you will receive at most half of the credit for the operation, no matter how "close" to be correct the code looks.
- The exam is open-book, open-internet. You are free to look up information online; however, understand that this is an individual exam, which means you may not ask/provide/receive help from anyone - doing so will be considered cheating.
- The total time for the exam will be 2 hours and 10 minutes. **The deadline is strict and there won't be any due time extension.** The application must be deployed on CS3 and the source code uploaded to Canvas. **You will not receive any credit for code that is not deployed/uploaded by 8:15pm (i.e. 5 minutes after the due time).**

If you have any questions about the midterm, please post them in the weekly discussion.
